PT New isolated or purified nucleic acid associated with multiple sclerosis
PT and/or rheumatoid arthritis, useful for detecting a virus associated with
PT multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS Example 19; Fig 50A; 193pp; English.
XX
CC The invention relates to an isolated or purified nucleic acid from a
CC virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC proteins or defined peptides (including immunodominant peptides,
CC antigenic peptides or conserved motifs).Also included are a process for
CC detecting a virus associated with multiple sclerosis or rheumatoid
CC arthritis in a biological sample, a nucleic acid probe for the detection
CC of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC primer for the amplification by polymerisation of a nucleic acid of a
CC viral material associated with multiple sclerosis or rheumatoid
CC arthritis, a polypeptide exhibiting an inhibitory activity on the
CC proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC and an antibody directed against the MSRV-1 virus obtained by
CC immunologically reacting a human or animal body or cells with an
CC immunogenic agent consisting of the antigenic polypeptide defined above.
CC The nucleic acids are useful for detecting a biological sample a virus
CC associated with multiple sclerosis or rheumatoid arthritis, or for
CC detecting in a biological sample, the presence of or exposure to a virus
CC associated with multiple sclerosis or rheumatoid arthritis. The present
CC sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC The SEQ ID numbers for the sequences as displayed in the main body of the
CC patent do not match the SEQ ID numbers in the sequence listing.
CC Consequently those sequences mentioned in the claims may not be the
CC sequences the authors intended to claim.

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Example 19; Page 201; 286pp; English.
XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) pol gene region of clone 42 obtained from an MS
CC   patient 68-1. The example compares the pol regions of different clones
CC   obtained from the same patients plasma sample. The results show that the
CC   patient possesses a virion population which comprises of different MSRV
CC   variants. The invention provides complete or partial genomic sequences of
CC   the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by
CC   these genes. The invention also provides antibodies raised against the
CC   polypeptides. The genomic sequences, polypeptides and antibodies are also
CC   claimed useful for diagnosing infection by MS and rheumatoid arthritis-
CC   associated viruses, and also for prevention and treatment of infection
CC   with these viruses

XX
PT New isolated or purified nucleic acid associated with multiple sclerosis
PT and/or rheumatoid arthritis, useful for detecting a virus associated with
PT multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS Example 19; Fig 50A; 193pp; English.
XX
CC The invention relates to an isolated or purified nucleic acid from a
CC virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC proteins or defined peptides (including immunodominant peptides,
CC antigenic peptides or conserved motifs).Also included are a process for
CC detecting a virus associated with multiple sclerosis or rheumatoid
CC arthritis in a biological sample, a nucleic acid probe for the detection
CC of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC primer for the amplification by polymerisation of a nucleic acid of a
CC viral material associated with multiple sclerosis or rheumatoid
CC arthritis, a polypeptide exhibiting an inhibitory activity on the
CC proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC and an antibody directed against the MSRV-1 virus obtained by
CC immunologically reacting a human or animal body or cells with an
CC immunogenic agent consisting of the antigenic polypeptide defined above.
CC The nucleic acids are useful for detecting a biological sample a virus
CC associated with multiple sclerosis or rheumatoid arthritis, or for
CC detecting in a biological sample, the presence of or exposure to a virus
CC associated with multiple sclerosis or rheumatoid arthritis. The present
CC sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC The SEQ ID numbers for the sequences as displayed in the main body of the
CC patent do not match the SEQ ID numbers in the sequence listing.
CC Consequently those sequences mentioned in the claims may not be the
CC sequences the authors intended to claim.

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 1; SEQ ID NO 3921; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 1; SEQ ID NO 4028; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Disclosure; Page 112; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV-associated sequence whose identity cannot be
CC   accurately determined. Note: The SEQ ID numbers for the sequences as
CC   displayed in the main body of the patent do not match the SEQ ID numbers
CC   in the sequence listing. Consequently those sequences mentioned in the
CC   claims may not be the sequences the authors intended to claim.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 23371; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PT New isolated nucleic acids and polypeptides, useful for diagnosing,
PT treating and/or preventing human diseases and disorders.
XX
PS Disclosure; SEQ ID NO 365; 664pp + Sequence Listing; English.
XX
CC The invention relates to human polynucleotides (AAI63803-AAI64012) and
CC the encoded proteins (AAM434497-AAM43660) useful for preventing, treating
CC or ameliorating medical conditions e.g. by protein or gene therapy. The
CC genes were isolated from a range of human tissues disclosed in the
CC specification. The nucleic acids, proteins, antibodies and (ant)agonists
CC are useful in the diagnosis, treatment and prevention of: (a) cancer,
CC e.g. breast and ovarian cancer and other cancers of the adrenal gland,
CC bone, bone marrow, breast, gastrointestinal tract, liver, lung, or
CC urogenital; (b) immune disorders e.g. Addison's disease, allergies,
CC autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus,
CC Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d)
CC wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC and parasitic infections. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
PT   Isolated nucleic acid molecule encoding a calcium-binding protein is used
PT   in preventing, treating or ameliorating a medical condition.
XX
PS   Disclosure; SEQ ID NO 183; 542pp; English.
XX
CC   The present invention relates to the isolation of novel human calcium-
CC   binding proteins (AAU19892-AAU19969), and cDNA and genomic sequences
CC   encoding for these proteins. The sequences of the invention are useful in
CC   the diagnosis, prevention and/or prognosis of diseases associated with
CC   aberrant calcium flux. Such disorders include neurological diseases (e.g.
CC   amylotrophic lateral sclerosis, ALS), immune dysfunction (e.g. severe
CC   combined immunodeficiency, SCID), digestive disorders (e.g. irritable
CC   bowel syndrome, IBS), neoplastic disease (e.g. cancer), blood disorders
CC   (e.g. haemophilia), and/or infectious disease (e.g. acquired
CC   immunodeficiency syndrome, AIDS). The novel calcium-binding proteins are
CC   also useful as screening tools to identify antagonists and/or agonists
CC   that may enhance or inhibit activities mediated by calcium-binding
CC   proteins. The polynucleotides of the invention are also useful in gene
CC   therapy. AAS31655-AAS31680 represent genomic sequences encoding for the
CC   novel human calcium-binding proteins. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Secreted and transmembrane PRO polypeptides and nucleic acids for
PT   diagnosing, preventing or treating diseases associated with aberrant
PT   expression or activity of the polypeptide, e.g. cancer, asthma, AIDS,
PT   Parkinson's disease or diabetes.
XX
PS   Claim 4; SEQ ID NO 365; 284pp; English.
XX
CC   The invention relates to a secreted and transmembrane PRO polypeptides
CC   and the polynucleotides encoding them. The polypeptides and
CC   polynucleotides are useful in diagnosing, preventing, prognosing or
CC   treating diseases or disorders associated with aberrant expression and/or
CC   activity of PRO polypeptides, such as neural disorders, immune system
CC   disorders, muscular disorders, reproductive disorders, gastrointestinal
CC   disorders, pulmonary disorders, cardiovascular disorders, renal
CC   disorders, proliferative disorders and/or cancers. In particular, these
CC   diseases are systemic lupus erythematosus, rheumatoid arthritis, multiple
CC   sclerosis, thyroiditis, anaemia, Grave's disease, diabetes, hepatitis,
CC   asthma, allergies, nephritis, Parkinson's disease, Alzheimer's disease,
CC   atherosclerosis, myocardial infarction, AIDS, infections, etc. This
CC   sequence represents a human PRO polynucleotide of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at seqdata.uspto.gov/sequence.html.

PT   New polynucleotides encoding human secreted proteins - derived from e.g.
PT   human blood, kidney, foetal lung, placenta, testes, brain, ovary,
PT   pituitary, retina and colon cDNA libraries.
XX
PS   Claim 1; Page 199; 633pp; English.
XX
CC   This sequence represents an expressed sequence tag (EST), and is a
CC   polynucleotide of the invention. The polynucleotides of the invention are
CC   all secreted EST sequences isolated from a variety of human tissue
CC   sources. The EST sequences and proteins encoded by them are predicted to
CC   have useful biological activities which would make them suitable for
CC   treating, preventing or ameliorating medical conditions in humans and
CC   animals, although no supporting data is given. Suggested activities
CC   include nutritional activity, immune stimulating or suppressing activity,
CC   haematopoiesis regulating activity, tissue growth activity,
CC   activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, cadherin/tumour invasion suppressor activity, tumour inhibition
CC   activity. The EST sequences are also stated to be useful for gene therapy

XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) pol gene region of clone 8 obtained from an MS
CC   patient 46-7. The example compares the pol regions of different clones
CC   obtained from the same patients plasma sample. The results show that the
CC   patient possesses a virion population which comprises of different MSRV
CC   variants. The invention provides complete or partial genomic sequences of
CC   the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by
CC   these genes. The invention also provides antibodies raised against the
CC   polypeptides. The genomic sequences, polypeptides and antibodies are also
CC   claimed useful for diagnosing infection by MS and rheumatoid arthritis-
CC   associated viruses, and also for prevention and treatment of infection
CC   with these viruses

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 19; Fig 49A; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
```

```
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC   The SEQ ID numbers for the sequences as displayed in the main body of the
CC   patent do not match the SEQ ID numbers in the sequence listing.
CC   Consequently those sequences mentioned in the claims may not be the
CC   sequences the authors intended to claim.

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
```

```
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Example 19; Page 203; 286pp; English.
XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) pol gene region of clone 1 obtained from an MS
CC   patient 46-7. The example compares the pol regions of different clones
CC   obtained from the same patients plasma sample. The results show that the
CC   patient possesses a virion population which comprises of different MSRV
CC   variants. The invention provides complete or partial genomic sequences of
CC   the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by
CC   these genes. The invention also provides antibodies raised against the
CC   polypeptides. The genomic sequences, polypeptides and antibodies are also
CC   claimed useful for diagnosing infection by MS and rheumatoid arthritis-
CC   associated viruses, and also for prevention and treatment of infection
CC   with these viruses

XX
PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 19; Fig 49A; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC   The SEQ ID numbers for the sequences as displayed in the main body of the
CC   patent do not match the SEQ ID numbers in the sequence listing.
CC   Consequently those sequences mentioned in the claims may not be the
CC   sequences the authors intended to claim.

PT   Identifying drugs for and diagnosing benign prostatic hyperplasia, by
PT   detecting expression levels of one or more genes in prostate cells from
PT   patient that are differentially regulated compared to normal prostate
PT   cells.
XX
PS   Disclosure; Page 111; 444pp; English.
XX
CC   The invention relates to a method of diagnosing (I) the onset or
CC   progression of benign prostatic hyperplasia (BPH), or screening (II) for
CC   or identifying an agent that modulates the onset or progression of BPH.
CC   The method is based on changes in gene expression in BPH tissue isolated
CC   from patients exhibiting different clinical states of prostate
CC   hyperplasia as compared to normal prostate tissue. (I) comprises
CC   detecting the expression levels of one or more genes in prostate cells
CC   from the subject that are differentially regulated compared to normal
CC   prostate cells. (II) comprises preparing a first gene expression profile
CC   of BPH cells or BPH-like cell population, exposing the cells to the
CC   agent, preparing a second gene expression profile of the agent exposed
CC   cells, and comparing the first and second gene expression profiles. (I)
CC   is useful for diagnosing the onset or progression of BPH. (II) is useful
CC   for identifying an agent that modulates the onset or progression of BPH.
CC   The methods are useful to present information identifying the expression
CC   level in a tissue or cells, by comparing the expression level of genes
CC   given in the specification in the tissue or cells to the level of
CC   expression of gene in the database, and displaying the expression levels
CC   of at least one gene in the tissue or cell sample compared to the
CC   expression level in BPH. Agents using (II) are useful for treating BPH or
CC   prostate cancer. ABK64106-ABK64860 represent human benign prostatic
CC   hyperplasia gene sequences of the invention

PT   Diagnosing and detecting the progression of liver cancer, hepatocellular
PT   carcinoma or metastatic liver tumor in a patient, involves detecting the
PT   level of expression of two or more genes in a liver tissue sample.
XX
PS   Claim 1; SEQ ID NO 538; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) pol gene region of clone 5 obtained from an MS
CC   patient 46-7. The example compares the pol regions of different clones
CC   obtained from the same patients plasma sample. The results show that the
CC   patient possesses a virion population which comprises of different MSRV
CC   variants. The invention provides complete or partial genomic sequences of
CC   the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by
CC   these genes. The invention also provides antibodies raised against the
CC   polypeptides. The genomic sequences, polypeptides and antibodies are also
CC   claimed useful for diagnosing infection by MS and rheumatoid arthritis-
CC   associated viruses, and also for prevention and treatment of infection
CC   with these viruses

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
```

```
XX
PS   Example 19; Fig 49A; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC   The SEQ ID numbers for the sequences as displayed in the main body of the
CC   patent do not match the SEQ ID numbers in the sequence listing.
CC   Consequently those sequences mentioned in the claims may not be the
CC   sequences the authors intended to claim.

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 3387; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 1; SEQ ID NO 3391; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
CC   The present invention provides a number of single exon nucleic acid
CC   probes which are derived from genomic sequences expressed in the human
CC   bone marrow. They can be used to measure gene expression in bone marrow
CC   samples, which may enable the improved diagnosis and treatment of cancers
CC   such as lymphoma, leukaemia and myeloma. The present sequence is one of
CC   the probes of the invention

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   brains.
XX
PS   Example 4; SEQ ID NO 3404; 650pp + Sequence Listing; English.
XX
CC   The present invention provides a number of single exon nucleic acid
CC   probes which are derived from genomic sequences expressed in the human
CC   brain. They can be used to measure gene expression in brain cell samples,
CC   which may enable the diagnosis and improved treatment of nervous system
CC   diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
CC   epilepsy and cancers. The present sequence is one of the probes of the
CC   invention

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 1; SEQ ID NO 3470; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel single exon nucleic acid probe used to measuring gene expression in
PT   a human breast.
XX
PS   Claim 25; SEQ ID NO 3325; 322pp; English.
XX
CC   The present invention relates to novel single exon nucleic acid probes.
CC   The present sequence is one such probe. The probes are useful for
CC   measuring human gene expression in a human breast sample, where the probe
CC   hybridises at high stringency to a nucleic acid expressed in the human
CC   breast. The probes are useful for predicting, diagnosing, grading,
CC   staging, monitoring and prognosing diseases of the human breast,
CC   particularly those diseases with polygenic aetiology. The diseases
CC   include: breast cancer, disorders of development, inflammatory diseases
CC   of the breast, fibrocystic changes, proliferative breast disease and non-
CC   carcinoma tumours. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 1; SEQ ID NO 3387; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
PS   Claim 25; SEQ ID NO 4232; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 1; SEQ ID NO 4225; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease. Note: The sequence data for this patent did not
CC   form part of the printed specification, but was obtained in electronic
CC   format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 1; SEQ ID NO 4262; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 4313; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 1; SEQ ID NO 4299; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Single exon nucleic acid probes for analyzing gene expression in human
PT hearts.
XX
PS Claim 1; SEQ ID NO 4227; 530pp; English.
XX
CC The present invention relates to single exon nucleic acid probes for
CC measuring human gene expression in a sample derived from human heart. The
CC present sequence is one such probe. The probes may be used for
CC predicting, measuring and displaying gene expression in samples derived
CC from the human heart via microarrays. By measuring gene expression, the
CC probes are useful for predicting, diagnosing, grading, staging,
CC monitoring and prognosing diseases of the human heart and vascular system
CC e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC congenital heart disease. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 1; SEQ ID NO 4428; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel single exon nucleic acid probe used to measuring gene expression in
PT   a human breast.
XX
PS   Claim 25; SEQ ID NO 4195; 322pp; English.
XX
CC   The present invention relates to novel single exon nucleic acid probes.
CC   The present sequence is one such probe. The probes are useful for
CC   measuring human gene expression in a human breast sample, where the probe
CC   hybridises at high stringency to a nucleic acid expressed in the human
CC   breast. The probes are useful for predicting, diagnosing, grading,
CC   staging, monitoring and prognosing diseases of the human breast,
CC   particularly those diseases with polygenic aetiology. The diseases
CC   include: breast cancer, disorders of development, inflammatory diseases
CC   of the breast, fibrocystic changes, proliferative breast disease and non-
CC   carcinoma tumours. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 1; SEQ ID NO 4344; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
CC The invention describes a new isolated polynucleotide (I) encoding a
CC polypeptide with biological activity comprising: a nucleotide sequence of
CC SEQ ID NOS: 1-567 (fully defined); a nucleotide sequence that hybridizes
CC to the sequence of (i) under stringent hybridization conditions; or a
CC nucleotide sequence having greater than 99% sequence identity with the
CC sequence of (i). Also described are: a(n) (expression)vector comprising
CC (I); a host cell genetically engineered to comprise (I) operatively,
CC associated with a regulatory sequence that modulates expression of the
CC polynucleotide in the host cell; an isolated polypeptide comprising a
CC sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide
CC is: a polypeptide encoded by (I); or a polypeptide encoded by a
CC polynucleotide hybridizing under stringent conditions with any one of SEQ
CC ID NOS: 1-567; a composition comprising the polypeptide of (3) and a
CC carrier; an antibody directed against the polypeptide of (3); a method
CC for detecting (I) in a sample; a method for detecting the polypeptide of
CC (3) in a sample; a method for identifying a compound that binds to the
CC polypeptide of (3); a method of producing the polypeptide of (3); and a
CC collection of polynucleotides, where the collection comprising of at
CC least one of SEQ ID NOS: 1-567. (I) is a polynucleotide comprising any of
CC the sequences of SEQ ID NOS: 1-567 encoding a polypeptide with biological
CC activity, which comprises any of the amino acid sequence of SEQ ID NOS:
CC 568-1134. All sequences are fully defined in the specification. The
CC sequences and methods are useful in diagnostics, forensic, and gene
CC mapping, in identifying of mutations responsible for genetic disorders or
CC other traits, in assessing biodiversity, and for producing many other
CC types of data and products dependent on DNA and amino acid sequences. The
CC composition and method are useful for treating a disease or disorder,
CC e.g. osteoporosis, osteoarthritis, periodontal disease, burns, CNS and
CC peripheral disease, Alzheimer's disease, Parkinson's disease, stroke,
CC autoimmune disorders, viral infection, or cancer. This sequence
CC represents a novel polynucleotide of the invention.

PT   New polynucleotide encoding a polypeptide with biological activity,
PT   useful for treating a disease or disorder, e.g. osteoarthritis, burns,
PT   CNS and peripheral disease, stroke, autoimmune disorders, viral
PT   infection, or cancer.
XX
PS   Example 3; SEQ ID NO 1492; 500pp; English.
XX
CC   The invention describes a new isolated polynucleotide (I) encoding a
CC   polypeptide with biological activity comprising: a nucleotide sequence of
CC   SEQ ID NOS: 1-567 (fully defined); a nucleotide sequence that hybridizes
CC   to the sequence of (i) under stringent hybridization conditions; or a
CC   nucleotide sequence having greater than 99% sequence identity with the
CC   sequence of (i). Also described are: a(n) (expression)vector comprising
CC   (I); a host cell genetically engineered to comprise (I) operatively,
CC   associated with a regulatory sequence that modulates expression of the
CC   polynucleotide in the host cell; an isolated polypeptide comprising a
CC   sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide
CC   is: a polypeptide encoded by (I); or a polypeptide encoded by a
CC   polynucleotide hybridizing under stringent conditions with any one of SEQ
CC   ID NOS: 1-567; a composition comprising the polypeptide of (3) and a
CC   carrier; an antibody directed against the polypeptide of (3); a method
CC   for detecting (I) in a sample; a method for detecting the polypeptide of
CC   (3) in a sample; a method for identifying a compound that binds to the
CC   polypeptide of (3); a method of producing the polypeptide of (3); and a
CC   collection of polynucleotides, where the collection comprising of at
CC   least one of SEQ ID NOS: 1-567. (I) is a polynucleotide comprising any of
CC   the sequences of SEQ ID NOS: 1-567 encoding a polypeptide with biological
CC   activity, which comprises any of the amino acid sequence of SEQ ID NOS:
CC   568-1134. All sequences are fully defined in the specification. The
CC   sequences and methods are useful in diagnostics, forensic, and gene
CC   mapping, in identifying of mutations responsible for genetic disorders or
CC   other traits, in assessing biodiversity, and for producing many other
CC   types of data and products dependent on DNA and amino acid sequences. The
CC   composition and method are useful for treating a disease or disorder,
CC   e.g. osteoporosis, osteoarthritis, periodontal disease, burns, CNS and
CC   peripheral disease, Alzheimer's disease, Parkinson's disease, stroke,
CC   autoimmune disorders, viral infection, or cancer. This sequence
CC   represents a novel polynucleotide of the invention.

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 23136; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX
PS Claim 4; SEQ ID NO 22254; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC ; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe open reading frame of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human cervical epithelial cells.
XX
PS Claim 25; SEQ ID NO 17763; 487pp; English.
XX
CC The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   brains.
XX
PS   Example 4; SEQ ID NO 24800; 650pp + Sequence Listing; English.
XX
CC   The present invention provides a number of single exon nucleic acid
CC   probes which are derived from genomic sequences expressed in the human
CC   brain. They can be used to measure gene expression in brain cell samples,
CC   which may enable the diagnosis and improved treatment of nervous system
CC   diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
CC   epilepsy and cancers. The present sequence is one of the probes of the
CC   invention

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 25392; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 24288; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
```

```
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 58; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 3318; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 1; SEQ ID NO 3326; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 1; SEQ ID NO 3393; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel single exon nucleic acid probe used to measuring gene expression in
PT   a human breast.
XX
PS   Claim 25; SEQ ID NO 3269; 322pp; English.
XX
CC   The present invention relates to novel single exon nucleic acid probes.
CC   The present sequence is one such probe. The probes are useful for
CC   measuring human gene expression in a human breast sample, where the probe
CC   hybridises at high stringency to a nucleic acid expressed in the human
CC   breast. The probes are useful for predicting, diagnosing, grading,
CC   staging, monitoring and prognosing diseases of the human breast,
CC   particularly those diseases with polygenic aetiology. The diseases
CC   include: breast cancer, disorders of development, inflammatory diseases
CC   of the breast, fibrocystic changes, proliferative breast disease and non-
CC   carcinoma tumours. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 1; SEQ ID NO 3317; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 59; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 58; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT New spatially-addressable set of single exon nucleic acid probes, useful
PT for measuring gene expression in sample derived from human breast,
PT comprises number of single exon nucleic acid probes.
XX
PS Claim 4; SEQ ID NO 6955; 327pp + Sequence Listing; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human breast and BT 474 cells. The method involves contacting the
CC probes with a collection of detectably labelled nucleic acids derived

```
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts.
XX
PS   Claim 4; SEQ ID NO 11676; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease. Note: The sequence data for this patent did not
CC   form part of the printed specification, but was obtained in electronic
CC   format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 14867; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX
PS Claim 4; SEQ ID NO 14322; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC ; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe open reading frame of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 59; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 60; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 20002; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 1; SEQ ID NO 17183; 80pp; English.
XX
CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above- mentioned amino acid
CC   sequences (optionally with conservative amino acid substitutions), an
CC   isolated antibody that binds specifically to a peptide cited above,
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
```

```
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PS   Claim 25; SEQ ID NO 13141; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 9057; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human bone marrow.
XX
PS   Example 4; SEQ ID NO 17010; 658pp + Sequence Listing; English.
XX
CC   The present invention provides a number of single exon nucleic acid
CC   probes which are derived from genomic sequences expressed in the human
CC   bone marrow. They can be used to measure gene expression in bone marrow
CC   samples, which may enable the improved diagnosis and treatment of cancers
CC   such as lymphoma, leukaemia and myeloma. The present sequence is one of
CC   the probes of the invention

XX
PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 17055; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Disclosure; Page 182; 286pp; English.
XX
CC   The present sequence represents a multiple sclerosis (MS) associated
CC   retrovirus (MSRV) genomic fragment used in the method of the invention.
CC   The invention provides complete or partial genomic sequences of the MSRV-
CC   1 pol gene, gag gene and env gene, and polypeptides encoded by these
CC   genes. The invention also provides antibodies raised against the
CC   polypeptides. The genomic sequences, polypeptides and antibodies are also
CC   claimed useful for diagnosing infection by MS and rheumatoid arthritis-
CC   associated viruses, and also for prevention and treatment of infection
CC   with these viruses

PT New human genome-derived single exon nucleic acid probes useful for human
PT gene expression analysis, for identifying or characterizing alternative
PT splicing events, for assessing genomic alterations or as tools for
PT surveying tissues.
XX
PS Claim 1; SEQ ID NO 14268; 80pp; English.
XX
CC The invention relates to a nucleic acid probe for measuring human gene
CC expression, comprising any of the 27,400 fully defined nucleotide
CC sequences in the specification, or their complements or fragments, and
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC fully defined in the specification. The probe is a single exon probe that
CC hybridises under high stringency conditions to a nucleic acid molecule
CC expressed in human cells or tissues. Also included are a spatially-
CC addressable set of single exon nucleic acid probes for measuring human
CC gene expression (comprising a plurality of single exon nucleic acid
CC probes cited above, where each of the plurality of probes is separately
CC and addressably isolatable or amplifiable from the plurality), a single
CC exon microarray for measuring human gene expression, a method of
CC measuring human gene expression, a vector comprising the single exon
CC probe cited above, an ORF-encoded peptide comprising at least 8
CC contiguous amino acids of any of the above- mentioned amino acid
CC sequences (optionally with conservative amino acid substitutions), an
CC isolated antibody that binds specifically to a peptide cited above,
CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising

```
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   Retroviral expression vector, useful in gene therapy, contains a promoter
PT   from a human endogenous retrovirus to provide cell-specific expression.
XX
PS   Disclosure; Page 58; 67pp; German.
XX
CC   This invention describes a novel retroviral expression vector (A)
CC   containing DNA sequences (I) for packaging vector RNA and for cell-
CC   specific expression of proteins or peptides encoding by heterologous DNA
CC   (II). The sequences controlling cell-specific expression contain a cell-
CC   specifically regulatable promoter region (P) from a human endogenous
CC   retrovirus (HERV) DNA sequence. The invention also describes (a) mRNA and
CC   RNA of (A); (b) prokaryotic and eukaryotic cells containing (A); (c)
CC   eukaryotic cells containing (A) in integrated form; (d) virions
CC   containing a retroviral expression vector RNA derived from (A); (e) a
CC   method for producing the virions of (d); (f) a method for incorporating
CC   protein-encoding nucleic acid sequences into a eukaryotic cell by
CC   infection with the virions of (d); and (g) a retroviral vector system
CC   containing (A) and a packaging cell line, that contains at least one
CC   (recombinant) retrovirus construct that encodes for the packaging
CC   proteins of (A). (A) are used for cell- or tissue-specific expression of
CC   foreign genes for gene therapy and to produce virions for introducing
CC   (II) into the chromosomal DNA of eukaryotic cells, preferably mammalian
CC   and specifically human. (A) retain the advantages of usual retroviral
CC   promoters with all the signal structures required for transcription in a
CC   small region within the U3-R segment, but without their disadvantages
CC   (excessive strength and limited cell specificity). Since (A) are derived
CC   from endogenous (harmless) viral sequences, they do not introduce any new
CC   viral sequences into the genome and recombination will not create new
CC   types of retrovirus. The promoters provide cell or tissue specific
CC   expression, according to which HERV they are derived from

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Claim 31; Page 76; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is a claimed MSRV-associated sequence whose identity cannot be
CC   accurately determined. Note: The SEQ ID numbers for the sequences as
CC   displayed in the main body of the patent do not match the SEQ ID numbers
CC   in the sequence listing. Consequently those sequences mentioned in the
CC   claims may not be the sequences the authors intended to claim.

PS   Claim 1; SEQ ID NO 1006; 571pp; English.
XX
CC   The present sequence represents an isolated polynucleotide sequence (I)
CC   from the present invention, which encodes a polypeptide (II) with
CC   biological activity. Also described: (1) a vector comprising (I); (2) an
CC   expression vector comprising (I); (3) a host cell genetically engineered
CC   to comprise (I) which is operatively associated with a regulatory
CC   sequence that modulates expression of (I) in the host cell; (4) a
CC   polypeptide (II) encoded by (I); (5) a composition comprising the
CC   polypeptide of (4) and a carrier; (6) an antibody directed against the
CC   polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a
CC   sample; (8) identifying a compound that binds to the polypeptide of (4);
CC   (9) producing the polypeptide of (4); and (10) a collection of
CC   polynucleotides comprising at least one of the polynucleotide sequences
CC   (I). The polynucleotides (I) can be used as hybridisation probes,
CC   oligomers or primers, for chromosome or gene mapping, for the recombinant
CC   production of proteins, and for generating antisense DNA or RNA.

PT   Two pathogenic or infectious agents associated with multiple sclerosis -
PT   one being a retrovirus, useful for early diagnosis, prevention and
PT   treatment.
XX
PS   Claim 3; Page 58; 104pp; French.
XX
CC   The partial nucleotide sequence of the pol gene from the multiple
CC   sclerosis associated infectious agent clone designated MSRV-1B F11-1. The
CC   MSRV-1B (AAT02815-23) and MSRV-2 clones (AAT02824-6) are derived from the
CC   same strain of infectious agent, either POL2 or MS7PG or their variants,
CC   and can be produced by the same cell line, LM7PC or PLI-2 or other cell
CC   culture infected with the multiple sclerosis associated agents. The
CC   clones were isolated by extracting nucleic acids from cells of multiple
CC   sclerosis patients, converting the nucleic acid to cDNA and PCR
CC   amplifying a region of the pol gene conserved in retroviruses. The clones
CC   isolated fell into 2 distinct types: one was similar to the ERV-9 and
CC   HSERV-9 endogenous retroviruses and designated MSRV-1B; the others were
CC   highly homologous to the known agent MSRV-2 and designated MSRV-2B. The
CC   nucleic acid, probes or primers derived from these sequences can be used
CC   for detecting agents associated with multiple sclerosis. The probes may
CC   be used to discriminate between these agents, opt. in conjunction with
CC   amplification primers and antibodies specific for the infectious agents

PT   Diagnosis, treatment and prevention of rheumatoid polyarthritis - using
PT   retroviral or other pathogenic or infectious material from the PLI-2 or
PT   LM7PC cell lines, or related nucleic acid.
XX
PS   Claim 3; Page 25; 68pp; French.
XX
CC   The invention relates to sequences isolated from members of a novel
CC   endogenous retrovirus family associated with sclerotic plaques and
CC   rheumatoid polyarthritis (RPA). The novel retroviral members are isolated
CC   from cells obtained from sclerotic plaques or synovial joint fluid from
CC   patients with RPA. Two novel strains of retrovirus are isolated: POL-2
CC   (ECACC V92072202) and MS7PG (ECACC V93010816), which are isolated from
CC   the cell lines PLI-2 and MS7PC respectively. This sequence is derived
CC   from a 5' RACE reaction from mRNA isolated from POL2 and MS7PG virions
CC   and forms nucleotides 1-297 of AAT37973. The viral sequences can be used
CC   for the diagnosis, prevention and treatment of RPA caused by infection or
CC   reactivation of the retroviruses. (Updated on 27-AUG-2003 to correct OS
CC   field.)

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Example 5; Fig 8; 286pp; English.
XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) clone F1-11 DNA sequence. The invention provides
CC   complete or partial genomic sequences of the MSRV-1 pol gene, gag gene
CC   and env gene, and polypeptides encoded by these genes. The invention also
CC   provides antibodies raised against the polypeptides. The genomic
CC   sequences, polypeptides and antibodies are also claimed useful for
CC   diagnosing infection by MS and rheumatoid arthritis-associated viruses,
CC   and also for prevention and treatment of infection with these viruses

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 5; Fig 8; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV cDNA clone. Note: The SEQ ID numbers for the
CC   sequences as displayed in the main body of the patent do not match the
CC   SEQ ID numbers in the sequence listing. Consequently those sequences
CC   mentioned in the claims may not be the sequences the authors intended to
CC   claim.

PT   New complex of bait and prey between two polypeptides or polynucleotides
PT   encoding the two polypeptides of adipocytes, useful for selecting a
PT   modulating compound that inhibits or activates protein-protein
PT   interactions.
XX
PS   Claim 7; SEQ ID NO 286; 232pp; English.
XX
CC   The invention relates to a bait-prey complex between two adipocyte
CC   polypeptides, or between two polynucleotides encoding adipocyte
CC   polypeptides. The invention also relates to Selected Interacting Domain
CC   (SID) polypeptides which interact with selected bait polypeptides;
CC   polynucleotides encoding SID polypeptides; vectors comprising SID
CC   polynucleotides; recombinant host cells comprising an adipocyte
CC   polynucleotide or a SID-encoding vector; a method of selecting for a
CC   compound which modulates interactions between adipocyte polypeptides;
CC   adipocyte modulator compounds identified using the method; a
CC   pharmaceutical composition comprising an adipocyte modulator, or a SID-
CC   encoding vector or host cell; and a protein chip comprising adipocyte
CC   bait polypeptides. The bait-prey complexes of the invention are useful
CC   for selecting a compound that inhibits or activates protein-protein
CC   interactions between adipocyte polypeptides. The modulatory compounds
CC   identified can be used in the treatment of metabolic diseases such as
CC   obesity, lipodystrophy and type 2 diabetes mellitus, and in the
CC   modulation of adipogenesis. The present sequence represents a
CC   specifically claimed adipocyte SID prey polynucleotide of the invention.

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human cervical epithelial cells.
XX
PS Claim 25; SEQ ID NO 10236; 487pp; English.
XX
CC The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 6144; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
```

```
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts.
XX
PS   Claim 4; SEQ ID NO 10904; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease. Note: The sequence data for this patent did not
CC   form part of the printed specification, but was obtained in electronic
CC   format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 14074; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 13575; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 9421; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts.
XX
PS   Claim 4; SEQ ID NO 14125; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease. Note: The sequence data for this patent did not

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 17439; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel single exon nucleic acid probe used to measuring gene expression in
PT   a human breast.
XX
PS   Claim 25; SEQ ID NO 9188; 322pp; English.
XX
CC   The present invention relates to novel single exon nucleic acid probes.
CC   The present sequence is one such probe. The probes are useful for
CC   measuring human gene expression in a human breast sample, where the probe
CC   hybridises at high stringency to a nucleic acid expressed in the human
CC   breast. The probes are useful for predicting, diagnosing, grading,
CC   staging, monitoring and prognosing diseases of the human breast,
CC   particularly those diseases with polygenic aetiology. The diseases
CC   include: breast cancer, disorders of development, inflammatory diseases
CC   of the breast, fibrocystic changes, proliferative breast disease and non-
CC   carcinoma tumours. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 16866; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 14888; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 38233; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   New human genome-derived single exon nucleic acid probes useful for human
PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 1; SEQ ID NO 18012; 80pp; English.
XX
CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above- mentioned amino acid
CC   sequences (optionally with conservative amino acid substitutions), an
CC   isolated antibody that binds specifically to a peptide cited above,
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Example 11; Fig 28; 286pp; English.
XX
CC   The present sequence represents a fragment of the multiple sclerosis (MS)
CC   associated retrovirus-1 (MSRV-1) pol DNA sequence. This fragment encodes
CC   a POL2B peptide used in the method of the invention. The invention
CC   provides complete or partial genomic sequences of the MSRV-1 pol gene,
CC   gag gene and env gene, and polypeptides encoded by these genes. The
CC   invention also provides antibodies raised against the polypeptides. The
CC   genomic sequences, polypeptides and antibodies are also claimed useful
CC   for diagnosing infection by MS and rheumatoid arthritis-associated
CC   viruses, and also for prevention and treatment of infection with these
CC   viruses

XX
PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 11; Fig 28; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC   The SEQ ID numbers for the sequences as displayed in the main body of the
CC   patent do not match the SEQ ID numbers in the sequence listing.
CC   Consequently those sequences mentioned in the claims may not be the
CC   sequences the authors intended to claim.

PT   New human genome-derived single exon nucleic acid probes useful for human
PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 1; SEQ ID NO 17995; 80pp; English.
XX
CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above- mentioned amino acid
CC   sequences (optionally with conservative amino acid substitutions), an
CC   isolated antibody that binds specifically to a peptide cited above,
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

XX
CC   The present sequence represents an isolated polynucleotide sequence (I)
CC   from the present invention, which encodes a polypeptide (II) with
CC   biological activity. Also described: (1) a vector comprising (I); (2) an
CC   expression vector comprising (I); (3) a host cell genetically engineered
CC   to comprise (I) which is operatively associated with a regulatory
CC   sequence that modulates expression of (I) in the host cell; (4) a
CC   polypeptide (II) encoded by (I); (5) a composition comprising the
CC   polypeptide of (4) and a carrier; (6) an antibody directed against the
CC   polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a
CC   sample; (8) identifying a compound that binds to the polypeptide of (4);
CC   (9) producing the polypeptide of (4); and (10) a collection of
CC   polynucleotides comprising at least one of the polynucleotide sequences
CC   (I). The polynucleotides (I) can be used as hybridisation probes,
CC   oligomers or primers, for chromosome or gene mapping, for the recombinant
CC   production of proteins, and for generating antisense DNA or RNA.

XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 9539; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 17559; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 16991; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS Claim 25; SEQ ID NO 11279; 487pp; English.
XX
CC The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human adult liver.
XX
PS Claim 4; SEQ ID NO 15134; 658pp; English.
XX
CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (I) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABS25011-ABS51005 represent human
CC liver single exon nucleic acid probes of the invention. Note: The
CC sequence information for this patent does not appear in the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX
PS Claim 4; SEQ ID NO 14546; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC ; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe open reading frame of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 18076; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human adult liver.
XX
PS Claim 4; SEQ ID NO 25692; 658pp; English.
XX
CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (I) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABS25011-ABS51005 represent human
CC liver single exon nucleic acid probes of the invention. Note: The
CC sequence information for this patent does not appear in the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX
PS Claim 4; SEQ ID NO 24654; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC ; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe open reading frame of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 22139; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 21537; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Diagnosis, treatment and prevention of rheumatoid polyarthritis - using
PT   retroviral or other pathogenic or infectious material from the PLI-2 or
PT   LM7PC cell lines, or related nucleic acid.
XX
PS   Claim 3; Page 35; 68pp; French.
XX
CC   The invention relates to sequences isolated from members of a novel
CC   endogenous retrovirus family associated with sclerotic plaques and
CC   rheumatoid polyarthritis (RPA). The novel retroviral members are isolated
CC   from cells obtained from sclerotic plaques or synovial joint fluid from
CC   patients with RPA. Two novel strains of retrovirus are isolated: POL-2
CC   (ECACC V92072202) and MS7PG (ECACC V93010816), which are isolated from
CC   the cell lines PLI-2 and MS7PC respectively. This sequence is clone
CC   MSRV1polPR which corresponds to sequences from the pol gene of the
CC   viruses. The sequence is amplified from retroviruses isolated from
CC   synovial joint fluid cells from patients with RPA. The viral sequences
CC   can be used for the diagnosis, prevention and treatment of RPA caused by
CC   infection or reactivation of the retroviruses. (Updated on 27-AUG-2003 to
CC   correct OS field.)

XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 8473; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 16436; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 15865; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
```

```
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 10235; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 4; SEQ ID NO 6143; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a single exon
CC   nucleic acid probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human adult liver.
XX
PS   Claim 4; SEQ ID NO 14073; 658pp; English.
XX
CC   The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC   measuring human gene expression in a sample derived from human adult
CC   liver, comprising one of 13109 defined nucleotide sequences given in the
CC   specification (or complements/ fragments). The probe hybridises at high
CC   stringency to a nucleic acid molecule expressed in the human adult liver.
CC   (I) may be used for predicting, measuring and displaying gene expression
CC   in samples derived from human adult liver. The genes identified may be
CC   involved in genetic liver diseases such as cirrhosis,
CC   hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC   associated with coronary heart disease. ABS25011-ABS51005 represent human
CC   liver single exon nucleic acid probes of the invention. Note: The
CC   sequence information for this patent does not appear in the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Novel single exon nucleic acid probe used to measuring gene expression in
PT a human breast.
XX
PS Claim 25; SEQ ID NO 5996; 322pp; English.
XX
CC The present invention relates to novel single exon nucleic acid probes.
CC The present sequence is one such probe. The probes are useful for
CC measuring human gene expression in a human breast sample, where the probe
CC hybridises at high stringency to a nucleic acid expressed in the human
CC breast. The probes are useful for predicting, diagnosing, grading,
CC staging, monitoring and prognosing diseases of the human breast,
CC particularly those diseases with polygenic aetiology. The diseases
CC include: breast cancer, disorders of development, inflammatory diseases
CC of the breast, fibrocystic changes, proliferative breast disease and non-
CC carcinoma tumours. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX
PS Claim 4; SEQ ID NO 13574; 634pp; English.
XX
CC The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC ; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe open reading frame of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New human genome-derived single exon nucleic acid probes useful for human
PT gene expression analysis, for identifying or characterizing alternative
PT splicing events, for assessing genomic alterations or as tools for
PT surveying tissues.
XX
PS Claim 1; SEQ ID NO 19320; 80pp; English.
XX
CC The invention relates to a nucleic acid probe for measuring human gene
CC expression, comprising any of the 27,400 fully defined nucleotide
CC sequences in the specification, or their complements or fragments, and
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC fully defined in the specification. The probe is a single exon probe that
CC hybridises under high stringency conditions to a nucleic acid molecule
CC expressed in human cells or tissues. Also included are a spatially-
CC addressable set of single exon nucleic acid probes for measuring human
CC gene expression (comprising a plurality of single exon nucleic acid
CC probes cited above, where each of the plurality of probes is separately
CC and addressably isolatable or amplifiable from the plurality), a single
CC exon microarray for measuring human gene expression, a method of
CC measuring human gene expression, a vector comprising the single exon
CC probe cited above, an ORF-encoded peptide comprising at least 8
CC contiguous amino acids of any of the above- mentioned amino acid
CC sequences (optionally with conservative amino acid substitutions), an
CC isolated antibody that binds specifically to a peptide cited above,
CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising
CC alternative splicing events, in detecting and characterising gross
CC alterations in the genomic locus that includes their exon, in assessing
CC smaller genomic alterations, in priming the synthesis of nucleic acids,
CC or in expressing the ORF-encoded peptide. The present sequence is a human
CC single exon probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

PT Diagnosis, treatment and prevention of rheumatoid polyarthritis - using
PT retroviral or other pathogenic or infectious material from the PLI-2 or
PT LM7PC cell lines, or related nucleic acid.
XX
PS Claim 3; Page 26; 68pp; French.
XX
CC The invention relates to sequences isolated from members of a novel
CC endogenous retrovirus family associated with sclerotic plaques and
CC rheumatoid polyarthritis (RPA). The novel retroviral members are isolated
CC from cells obtained from sclerotic plaques or synovial joint fluid from
CC patients with RPA. Two novel strains of retrovirus are isolated: POL-2
CC (ECACC V92072202) and MS7PG (ECACC V93010816), which are isolated from
CC the cell lines PLI-2 and MS7PC respectively. The sequences AAT37975-9 are
CC consensus sequences derived from the pol gene of those viral sequences
CC designated MSRV-1B, which have 70-88% homology to the human endogenous
CC retrovirus HSERV-9. The sequences were amplified using primers based on
CC reasonably conserved regions of exogenous and endogenous retroviral
CC polymerases and of viruses with reverse transcriptase activity. The
CC sequences can be used for the diagnosis, prevention and treatment of RPA
CC caused by infection or reactivation of the retroviruses. (Updated on 27-

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 1; Fig 1; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV gene, gene fragment or gene consensus sequence. Note:
CC   The SEQ ID numbers for the sequences as displayed in the main body of the
CC   patent do not match the SEQ ID numbers in the sequence listing.
CC   Consequently those sequences mentioned in the claims may not be the
CC   sequences the authors intended to claim.

PT   New isolated nucleic acid and their fragments having the pol gene of a
PT   retrovirus, useful for diagnosing, preventing and/or treating multiple
PT   sclerosis and/or rheumatoid arthritis.
XX
PS   Example 1; SEQ ID NO 7; 193pp; English.
XX
CC   The invention relates to an isolated nucleic acid which comprises the pol
CC   gene of a retrovirus associated with multiple sclerosis or rheumatoid
CC   arthritis. The methods and compositions of the present invention are
CC   useful for diagnosing, preventing and/or treating multiple sclerosis
CC   and/or rheumatoid arthritis. The present sequence is used in the
CC   exemplification of the invention.

US-09-864-761-4444
; Sequence 4444, Application US/09864761
; Patent No. US20020048763A1
; GENERAL INFORMATION:
;  APPLICANT: Penn, Sharron G.
;  APPLICANT:  Rank, David R.
;  APPLICANT:  Hanzel, David K.
;  APPLICANT:  Chen, Wensheng
;  TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR
;  TITLE OF INVENTION:  GENE EXPRESSION ANALYSIS BY MICROARRAY
;  FILE REFERENCE: Aeomica-X-1
;  CURRENT APPLICATION NUMBER: US/09/864,761
;  CURRENT FILING DATE:  2001-05-23
;  PRIOR APPLICATION NUMBER: US 60/180,312
;  PRIOR FILING DATE: 2000-02-04
;  PRIOR APPLICATION NUMBER: US 60/207,456
;  PRIOR FILING DATE: 2000-05-26
;  PRIOR APPLICATION NUMBER: US 09/632,366
;  PRIOR FILING DATE: 2000-08-03
;  PRIOR APPLICATION NUMBER: GB 24263.6
;  PRIOR FILING DATE: 2000-10-04
;  PRIOR APPLICATION NUMBER: US 60/236,359
;  PRIOR FILING DATE: 2000-09-27
;  PRIOR APPLICATION NUMBER: PCT/US01/00666
;  PRIOR FILING DATE: 2001-01-30
;  PRIOR APPLICATION NUMBER: PCT/US01/00667
;  PRIOR FILING DATE: 2001-01-30
;  PRIOR APPLICATION NUMBER: PCT/US01/00664
;  PRIOR FILING DATE: 2001-01-30
;  PRIOR APPLICATION NUMBER: PCT/US01/00669
;  PRIOR FILING DATE: 2001-01-30
;  PRIOR APPLICATION NUMBER: PCT/US01/00665
;  PRIOR FILING DATE: 2001-01-30
